FIT1056 Assessment Submission

SOFTWARE PROTOTYPING (DRAFT)

SPECIFICATIONS [GROUP SUBMISSION]

In this task, you will continue your journey of CodeVenture development and move from software design to implementation. You must follow object-oriented implementation guidelines (**discussed in the workshop**). The assumption is that you have either attended the workshop or seen the recording. Submit a short report on Moodle. Each task covers a performance statement explaining the quality expected in the task.

This task aims to assess the progress you and your team have made in the implementation phase of your group project. Submit a brief description of the core features you have already implemented in the project and the ones you plan to implement next (note that we expect to see at least 40% of the features to be implemented). Also, provide the breakdown of the team's composition on the implementation tasks. This stage focuses on demonstrating your work (a minimum working prototype with implemented features) during practical sessions to the assigned tutors.

GUIDELINES

- Please submit a brief report (no more than 500 words) as an online text in the designated Moodle submission link before the specified due date.

- This is a group submission. only one submission per group is required
